how strongly should you believe the various propositions that you can express that is the key question facing bayesian epistemology subjective bayesians hold that it is largely though not entirely up to the agent as to which degrees of belief to adopt objective bayesians on the other hand maintain that appropriate degrees of belief are largely though not entirely determined by the agent's evidence this book states and defends a version of objective bayesian epistemology according to this version objective bayesianism is characterized by three norms probability degrees of belief should be probabilities calibration they should be calibrated with evidence equivocation they should otherwise equivocate between basic outcomes objective bayesianism has been challenged on a number of different fronts for example some claim it is poorly motivated or fails to handle qualitative evidence or yields counter intuitive degrees of belief after updating or suffers from a failure to learn from experience it has also been accused of being computationally intractable susceptible to paradox language dependent and of not being objective enough especially suitable for graduates or researchers in philosophy of science foundations of statistics and artificial intelligence the book argues that these criticisms can be met and that objective bayesianism is a promising theory with an exciting agenda for further research

in the study of human thinking two main research questions can be asked descriptive q what is human thinking like normative q what ought human thinking be like for decades these two questions have dominated the field and the relationship between them generated many a controversy empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot in contemporary theories of reasoning and decision making this is often associated with a panglossian framework an adaptationist approach which regards human thinking as a priori rational in contrast prescriptive normativism sees the answers to these two questions as negatively correlated normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational prescriptive normativism often results in a meliorist agenda which sees rationality as amenable to education both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking following hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour this basic division carries over to the relation between normative ought rationality based on conforming to normative standards and

instrumental is rationality based on achieving one's goals; descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality. This research topic brings together diverse contributions to the continuing debate featuring contributions from leading researchers in the field. The e-book covers a wide range of subjects arranged by six sections: the standard picture, normativist perspectives in defence of soft normativism, exploring normative models, descriptivist perspectives, evolutionary and ecological accounts, empirical reports with a total of some 24 articles from 55 authors. This comprehensive treatment includes theoretical analyses, meta-theoretical critiques, commentaries and a range of empirical reports. The contents of the research topic should appeal to psychologists, linguists, philosophers and cognitive scientists with research interests in a wide range of domains from language through reasoning, judgment and decision making and moral judgment to epistemology and theory of mind, philosophical logic and meta-ethics.

The field of thinking has undergone a revolution in recent years opening itself up to new perspectives and applications. The traditional focus on laboratory-based thinking has transformed as theoretical work is now being applied to new contexts and real-world issues. This volume presents a state-of-the-art survey of human thinking in everyday life based around and in tribute to one of the field's most eminent figures, Ken Manktelow. In this collection of cutting-edge research, Manktelow's collaborators and colleagues review a wide range of important and developing areas of inquiry. This book explores modern perspectives on a variety of traditional and contemporary topics including Wason's reasoning tasks, logic, meta-reasoning and the effect of environment and context on reasoning. The Thinking Mind offers a unique combination of breadth, depth, theoretical exploration and real-world applications making it an indispensable resource for researchers and students of human thinking.
